https://framagit.org/Jean-Mi/FAST-FORTH

Words in braces {} are MARKER words.

FORTH vocabulary Words with hyperlink are ANSI compliant. The others are detailed below.

COLD WARM WTPF RST HERE DWD HEDE RST_STATE PWR_STATE **BEGIN** CREATE IMMEDIATE POSTPONE . ['] >NUMBER EVALUATE S" ABORT" FIND **ABORT** QUIT COUNT LITERAL WORD HOLD NOECHO SIGN KEY ACCEPT **TYPE**

COLD

WARM WIPE

Software reset primary DEFERed word, performs a hot start resets the program memory to its original state. defines the boundary of the program memory protected against COLD or hardware reset. defines the boundary of the program memory protected against ON/OFF and against any error occurring. remove all words defined after RST_HERE remove all words defined after PWR_HERE stop display on output start display on output RST_HERE PWR_HERE

RST_STATE PWR_STATE

NOECHO ECHO

ASSEMBLER vocabulary

?GOTO	GOTO	FW3	FW2	FW1	BW3	BW2	BW1
REPEAT	WHILE	AGAIN	UNTIL	ELSE	THEN	IF	0=
0⇔	U>=	U<	0<	0>=	S<	S>=	RRUM
RLAM	RRAM	RRCM	POPM	<u>PUSHM</u>	CALL	PUSH.B	<u>PUSH</u>
SXT	RRA.B	RRA	<u>SWPB</u>	RRC.B	RRC	AND.B	AND
XOR.B	XOR	BIS.B	BIS	BIC.B	BIC	BIT.B	BIT
DADD.B	DADD	CMP.B	<u>CMP</u>	SUB.B	<u>SUB</u>	SUBC.B	SUBC
ADDC.B	ADDC	ADD.B	ADD	MOV.B	MOV	RETI	LO2HI
COLON	ENDASM	ENDCODE					

ASM CODE HI2LO <-- added to FORTH vocabulary

creates an assembler word as CODE but which is not interpretable by FORTH (because use of CALL ... RET). this defined <word> must be ended with ENDASM. ASM <word>

CODE <word>

creates a FORTH words, ready to be written in assembly. This word must be terminated with ENDCODE unless using COLON or LO2HI.

used to switch from a high level (FORTH) to low level (assembler) modes. HT2LO

used after a conditionnal (0=,0<>,U>=,U<,0<,S<,S>=) to branch to a label FWx or BWx used as unconditionnal branch to a label FWx or BWx **?GOTO**

GOTO

FORWARD branch destination n°3 (single use) FORWARD branch destination n°2 (single use) FORWARD branch destination n°1 (single use) FW2 FW1

BACKWARD branch destination n°3 BACKWARD branch destination n°2 BACKWARD branch destination n°1 BW3 RW2

REPEAT

assembler version of the FORTH word REPEAT assembler version of the FORTH word WHILE assembler version of the FORTH word AGAIN assembler version of the FORTH word UNTIL assembler version of the FORTH word THEN assembler version of the FORTH word IF (unconditionnal branch) (conditionnal branch preceded by 0=,0<>,U>=,U<,0>=,S<,S>=) (unconditionnal branch) (conditionnal branch preceded by 0=,0<>,U>=,U<,0>=,S<,S>=) (unconditionnal branch) ends IF or IF ELSE statements (conditionnal branch preceded by 0=,0<>,U>=,U<,0>=,S<,S>=) WHILE UNTIL

THEN

switches between low level and high level interpretation mode (counterpart of HI2LO), without saving IP. pushes IP then performs LO2HI, used as: CODE <word> ... assembly code ... COLON ... FORTH words ...; to end an ASM definition to end a CODE definition LO2HI COL ON

ENDCODE

To better understand the use of the assembler I refer you to \MSP430-FORTH\ANS COMP.f and \MSP430-FORTH\RC5toLCD.f

Extended ASSEMBLER words

RPT	PUSHX.B	PUSHX.A	PUSHX	SXTX.A	SXTX	RRAX.B	RRAX.A
RRAX	SWPBX.A	SWPBX	RRUX.B	RRUX.A	RRUX	RRCX.B	RRCX.A
RRCX	ANDX.B	ANDX.A	ANDX	XORX.B	XORX.A	XORX	BISX.B
BISX.A	BISX	BICX.B	BICX.A	BICX	BITX.B	BITX.A	BITX
DADDX.B	DADDX.A	DADDX	CMPX.B	CMPX.A	<u>CMPX</u>	SUBX.B	SUBX.A
SUBX	SUBCX.B	SUBCX.A	SUBCX	ADDCX.B	ADDCX.A	ADDCX	ADDX.B
ADDX.A	ADDX	MOVX.B	MOVX.A	<u>MOVX</u>	CALLA	<u>SUBA</u>	<u>ADDA</u>
CMPA	MOVA						

used with Reg and Reg,Reg eXtended instructions, to repeat them 1 to 16 times. Example: RPT #12 ADDX R1,R1 will shift left 12 times R1 RPT #n|RPT Rn

Here are adds-on to be compiled

CONDCOMP

[ELSE] [DEFINED] [UNDEFINED] [IF] [THEN] MARKER **DEFINITIONS** ONLY **PREVIOUS** ASSEMBLER **FORTH** VOCABULARY

replace first words set in CONTEXT by the words set FORTH replace first words set in CONTEXT by the words set ASSEMBLER VOCABULARY TRUC creates a new words set called TRUC **FORTH** ASSEMBI FR

VOCABULARY

SD_CARD_LOADER

LOAD"

LOAD" SD_TEST.4TH" compiles/executes file SD_TEST.4TH from current_directory.
LOAD" \MISC\TEST_ASM.4TH" compiles/executes file TEST_ASM.4TH from current_directory\MISC\.
LOAD" \MISC" changes to directory \MISC
LOAD" ..\" changes to parent directory
LOAD" \" changes to root directory

SD_CARD_READ_WRITE

TERM2SD" DEL" WRITE" READ" SD EMIT WRITE CLOSE READ

TERM2SD" SD_TEST.4TH" copy input file to SD_CARD (use CopySourceFileToTarget_SD_Card.bat to do) write sequentially BUFFER content to a sector read sequentially a sector to BUFFER close last opened file. DEL" SD_TEST.4TH" remove this file from SD_CARD. WRITE" TRUC" open or create TRUC file ready to write to the end of this file READ" TRUC and load its first sector in BUFFER TERM2SD"

WRITE READ

CLOSE DEL"

WRITE"

READ"

see SD_TEST.f

DEFERRED ADD-ON

: NONAME **DEFER** IS CODENNM CODENNM assembly counterpart of :NONAME

BOOTLOADER

BOOT

QUIT becomes a primary DEFERed word

the input: 'BOOT IS QUIT allow downloadin to cancel the bootstrap: 'QUIT >BODY IS QUIT allow downloading BOOT.4th from SD CARD during the process RESET. BOOT

Below, adds-on that can be compiled in kernel or loaded later

ANS_COMPLEMENT

{ANS_COMP} do nothing if compiled in core, else remove all from {ANS_COMP}.

UTILITY

DUMP U.R **WORDS** ? .RS <u>.s</u> {TOOLS}

U.R u z --

display unsigned number u with size z
display Return Stack content
do nothing if compiled in core, else remove all from {TOOLS} {TOOLS}

SD_TOOLS

FAT CLUSTER {SD_TOOLS} DIR SECTOR

DIR

FAT CLUSTER

dump first sector of current directory
dump first sector of FAT1
.123 CLUSTER displays first sector of cluster 123
.123456789 SECTOR displays sector 123456789
do nothing if compiled in core, else remove all from {SD_TOOLS}. SECTOR {SD_TOOLS}

FIXPOINT you must uncomment the FIXPOINT_INPUT switch before use this add-on.

2CONSTANT HOLDS F/ {FIXPOINT}

S>F

F. F*

u/n -- Qlo Qhi convert u/n in a Q15.16 value display a Q15.16 value Q15.16 multiplication Qlo Qhi u -- Qhi O convert fractionnal part of a Q15.16 value Q15.16 division Q15.16 soustraction Q15.16 addition do nothing if compiled in core, else remove all from {FIXPOINT}. F#S convert fractionnal part of a Q15.16 value displaying u digits

{FIXPOINT}

build your FastForth local copy

```
download <a href="https://framagit.org/Jean-Mi/FAST-FORTH/tree/master">https://framagit.org/Jean-Mi/FAST-FORTH/tree/master</a> once you have unzipped it into your folder, share it (with you) and notice its network path. Then right clic on the root of your notepad to create a network drive by recopying this network path (change backslashes \ to slashes / ); then set drive letter as you want.
   In explorer you should obtain that:
drive:\

\PreprocessSourceFile.bat
\SelectTarget.bat
                                                                                                                                                       TERATERM macro file to send source file to FASTFORTH
TERATERM macro file to send source file to embedded SD_CARD
called by scite to build target.txt program
to flash target with target.txt file
to copy in your MSP430-FORTH
to send file to FASTFORTH
to convert generic .f file to specific .4th file
to copy in any user folder for drag'n drop use
to copy in any user folder for drag'n drop use
to copy in any user folder for drag'n drop use
called by them three to select target
   Note: all actions made from SciTE editor are processed via bat/bash files.
So you can easily use your prefered editor by reuse them.
```

Note: all actions (flacking target downloading files) can be made by using but files directly in a without

Note: all actions (flashing target, downloading files) can be made by using bat files directly, i.e. without use of SciTE editor.

```
The next is to download IDE (WINDOWS):
First get TI's programs
go here: http://www.ti.com/ and registers you to enable MSP430Flasher downloading:
http://www.ti.com/tool/msp430-flasher?DCMP=MSP430&HQS=Other+OT+msp430flasher
http://software-dl.ti.com/msp430/msp430_public_sw/mcu/msp430/MSP430_FET_Drivers/latest/index_FDS.html
install in the suggested directory,
then copy MSP430Flasher.exe and MSP430.dll to drive:\prog\
download and install teraterm: <a href="https://osdn.net/projects/ttssh2/releases/">https://osdn.net/projects/ttssh2/releases/</a>
https://sourceforge.net/projects/gema/files/latest/download
unzip in drive:\prog\
download http://www.scintilla.org/Sc41x.exe to drive:\prog\then rename Sc41x.exe to scite.exe
http://john.ccac.rwth-aachen.de:8000/ftp/as/precompiled/i386-unknown-win32/aswcurr.zip unzip in drive:\prog\
https://sourceforge.net/projects/srecord/files/srecord-win32/1.64/
unzip in drive:\prog\
In explorer you should obtain that (minimum requested programs):
drive:\prog\
                   SciTEGlobal.properties gema.exe
                   asw.exe
P2hex.exe
                   P2hex.exe
as.msg
cmdarg.msg
ioerrs.msg
P2hex.msg
tools.msg
MSP430Flasher.exe
MSP430.dll
srec_cat.exe
sCiTE.exe
Next we need to change the drive letter in hard links below:
drive:\binaries\prog.bat
drive:\MSP430-FORTH\SendSourceFileToTarget.bat
CopySourceFileToTarget_SD_Card.bat
PreprocessSourceFile.bat
to do, right clic on them
select "properties"
set your drive letter in "target"
The last step is ask Windows to associate scite editor with file types:
```

right clic on a .asm file,
select "open with",
select "other application" then select: drive:\prog\scite.exe

repeat for .inc, .lst, .f, .4th, .pat, .properties, .TTL files.

IT's done ! See forthMSP430FRxxxx.asm to configure TeraTerm

IDE for linux UBUNTU / MINT First search from ti.com: http://software-dl.ti.com/msp430/msp430_public_sw/mcu/msp430/MSP430Flasher/latest/index_FDS.html untar in a home folder then: open MSPFlasher-1.3.16-linux-x64-installer.run install in MSP430Flasher (under home) open a terminal in MSP430Flasher/Drivers: sudo ./msp430uif_install.sh copy MSP430Flasher/MSP430Flasher to /usr/local/bin/MSP430Flasher copy MSP430Flasher/libmsp430.so to /usr/local/lib/MSP430Flasher/libmsp430.so open an editor as superuser in /etc/ld.so.conf.d/ write on first line (of new file): /usr/local/lib/msp430flasher/ save this new file as libmsp430.conf then in a terminal: sudo /sbin/ldconfig install the package srecord install the package scite
as super user, edit /etc/scite/sciTEGlobal.properties
uncomment (line 18): position.maximize=1
uncomment (line 257): properties.directory.enable=1
add line 7: PLAT_wIN=0
add line 8: PLAT_GTK=1 save file at the end of your ~.profile file, add these two lines: FF="/the_root_of_your_FastForth_local_copy" export FF https://sourceforge.net/projects/gema/files/gema/gema-1.4-RC/gema-1.4RC-src.tgz/download
untar in a home folder then:
make (ignore warnings)
sudo make install (ignore warnings) make clean result in: /usr/local/bin/gema http://john.ccac.rwth-aachen.de:8000/ftp/as/source/c_version/asl-current.tar.gz
untar in a home folder then:
copy /Makefile.def-samples/Makefile.def-i386-unknown-linux2.x,x to ../Makefile.def
edit this Makefile.def to remove "-march=i586" option from line 7 (if any) make test sudo make install make clean result: asl files are in /usr/local install minicom package sudo gpasswd --add \${USER} dialout copy /config/msp430/.minirc.dfl in your home directory. In /inc/RemoveComments.pat, deselect windows part, select linux part.

With scite editor you can - assemble FastForth then download it to eZFET target,

With minicom you can send a file.4th to your target via dev/ttyUSBO, up to 4Mbauds: $CTRL_A + Y$ to send a file

edit your source filespreprocess file.f to file.4th
